

SNACKS SPOT POS

A lightweight restaurant Point of Sale (POS) and billing system built using HTML, CSS, JavaScript, Google Apps Script, and Google Sheets.

The application allows a snacks shop, tea shop, or small restaurant to manage menu items, create customer bills, generate UPI QR payments, store orders, and view sales reports without requiring a traditional database.

Features

Customer Billing

- Display menu items dynamically from Google Sheets
- Add items to cart
- Automatic bill calculation
- Clear cart functionality
- Print customer bills
- Generate UPI payment QR codes
- Save orders to Google Sheets

Menu Management

- Add menu items
- Update existing menu items
- Delete menu items
- Enable/disable menu items using status

Order Management

- Store order history
- Generate unique order IDs
- Record order date and time
- Store ordered items in JSON format

Reports

- Total orders count
- Total revenue calculation
- Monthly sales reporting

Authentication

- Admin login support

- Credentials stored in Google Sheets

Technology Stack

Frontend

- HTML5
- CSS3
- Vanilla JavaScript

Backend

- Google Apps Script

Database

- Google Sheets

Payment

- UPI QR Code Generation
-

Project Structure

SNACKS-SPOT/

```
├── index.html
├── style.css
├── script.js
└── Google Apps Script
    └── code.gs
```

Google Sheets Structure

Menu Sheet

ID	ItemName	Price	Image	Status
1	Idly	10	URL	Active

Orders Sheet

Order ID	Date	Items	Total
ORD12345	Timestamp	JSON	150

Admin Sheet

Username	Password
admin	password

Settings Sheet

Key	Value
UPI_ID	shop@upi

API Endpoints

GET APIs

Get Menu

?action=getMenu

Response

```
{  
  "success": true,  
  "menu": []  
}
```

Get Settings

?action=getSettings

Get Orders

?action=getOrders

Get Sales Report

?action=getReport

POST APIs

Login

```
{  
  "action": "login",  
  "username": "admin",  
}
```

```
  "password": "password"
}
```

Add Menu Item

```
{
  "action": "addMenu",
  "name": "Idly",
  "price": 10,
  "image": ""
}
```

Update Menu Item

```
{
  "action": "updateMenu",
  "id": 1,
  "name": "Special Idly",
  "price": 20,
  "image": ""
}
```

Delete Menu Item

```
{
  "action": "deleteMenu",
  "id": 1
}
```

Save Order

```
{
  "action": "saveOrder",
  "items": [
    {
      "name": "Idly",
      "qty": 2,
      "price": 10
    }
  ],
  "total": 20
}
```

Current Menu

- Idly
- Vada
- Pongal

- Coffee
- Lemon Juice
- Boost
- Badam Milk
- Masala Milk
- Lemon Rice
- Tamarind Rice
- Curd Rice
- Veg Fried Rice
- Veg Noodles
- Mini Meals
- Full Meals

How It Works

1. Menu items are stored in Google Sheets.
2. Frontend loads menu using Google Apps Script APIs.
3. User adds items to the cart.
4. Total bill is calculated automatically.
5. UPI QR code is generated for payment.
6. Order is saved to Google Sheets.
7. Reports are generated from stored orders.

Deployment

Deploy Google Apps Script

1. Open Apps Script.
2. Paste code.gs.
3. Save the project.
4. Deploy → New Deployment.
5. Select “Web App”.
6. Set access to “Anyone”.
7. Copy the deployment URL.

Configure Frontend

Update:

```
const API_URL = "YOUR_DEPLOYED_WEBAPP_URL";
```

Future Improvements

- Menu categories
 - Quantity increase/decrease buttons
 - Customer details
 - KOT (Kitchen Order Ticket)
 - GST support
 - Dashboard analytics
 - Sales charts
 - Inventory management
 - Employee login
 - Table management
 - Online ordering
 - PWA support
 - Offline mode
-
